Claims settlement overview

- **1,029** Total claims received
- **980** Claims settled
- **49** Remaining claims
- **ZERO** Rejections to date

980 of 1,029 claims have been settled, representing 95.2% of total claims. The remaining 49 claims are the difference between total and settled claims; their individual status has not been specified.

SETTLED 980 REMAINING 49

What supports our claims servicing

We assist clients with prompt incident reporting, preparation of claim records and coordination with insurers and surveyors. Regular follow-up helps identify outstanding documents and queries so that clients understand the next steps in the process.

Claims figures are cumulative and supplied by Gitvisha. The amount shown relates to settled claims; an aggregate amount for all 1,029 claims has not been provided. Settlement remains subject to the issued policy and insurer assessment.

Coverage and support
through the project lifecycle

Insurance should reflect how equipment is transported, installed, tested and operated. We help review suitable options against the project scope, asset values and responsibilities.

1 Marine transit

Review equipment movement, packing, loading, unloading and temporary storage within the agreed transit cover.

2 Erection All Risks

Assess insured physical loss or damage during installation and testing, with dates aligned to commissioning and handover.

3 Property protection

Review declared panels, structures, controllers and pumps against specified perils, including relevant fire and weather risks.

4 Machinery breakdown

Assess eligible equipment for sudden accidental electrical or mechanical breakdown, subject to the policy wording.

5 Third party liability

Review liability for third party injury or property damage arising from insured project activities.

6 Employee compensation

Review employer liability for work related injury, aligned with workforce details and the project scope.

Claims coordination and policy servicing

Our support includes initial claim intimation, assistance with invoices, photographs and equipment records, insurer and surveyor follow-up, claim status updates and settlement queries. Policy servicing includes endorsements for changes in equipment or locations and renewal documentation.

Prepare the right project information

Share site wise equipment schedules, component values, serial numbers, installation dates, ownership details, maintenance records and existing insurance. Review exclusions, deductibles and any limits for submerged equipment, underground cables and civil works.

Coverage is subject to insurer acceptance, issued policy terms, exclusions and deductibles. Contact Gitvisha to discuss your project requirements.

Gitvisha Insurance Services

Insurance support built around your project, your assets and your service needs.

Our company

Gitvisha Insurance Services supports businesses with insurance planning, policy placement, ongoing servicing and claims coordination. For solar pumping projects, we help clients review insurance requirements from equipment delivery and installation through operation and renewal.

Our client relationships span solar energy, renewable energy and pumping businesses. We focus on clear communication, complete documentation and regular follow-up so that project teams understand the scope of their insurance and the actions required at each stage.
